

Madrid Metro

Most-connected, carrier-neutral facilities on the Iberian Peninsula

At Equinix, digital leaders are bringing together all the right places, partners and possibilities to create the foundational infrastructure they need to succeed. Spain is fast becoming an essential hub on the global connectivity map. This is due to its physical location between Africa, Mediterranean Europe and Northern Europe, and its strong cultural connection to Latin America.

Spain represents a large domestic market with more than 46 million consumers and a world-class infrastructure. As the capital of Spain, Madrid is the third most-populated city in Europe and home to the country's main political, regulatory and administrative institutions.

Our two International Business Exchange™ (IBX®) data centers in Madrid (MD1 and MD2) are business hubs for 180+ companies, enabling businesses to build a digital edge alongside the largest industry ecosystems on Platform Equinix®. With upwards of 60 carriers providing network connectivity services, customers can choose from 50+ local and global cloud service providers, including AWS and

Google. Customers also benefit from direct connections to Equinix Internet™ as well access to ESpanix and DE-CIX for internet peering.

Equinix can accommodate deployments from single cabinets to large, multi-megawatt installations. Suitable for primary colocation or disaster recovery solutions, we offer flexible configurations and power densities with resilient power supplies to ensure guaranteed uptime.

Madrid metro facilities

The Equinix Madrid data centers consist of two buildings, connected by Metro Connect® with 78,000+ square feet (7,325+ square meters) of colocation space. Powered by 100% renewable energy, these premium facilities offer scalable technical space and fully redundant power supplies that deliver leading operational resiliency and world-class security.
