

## Mexico City Metro

Strategic hub for connectivity to North, Central and South America

**5+**  
Network

Equinix Mexico City is accelerating the growth and power of interconnection in an economy that is continuously facing fast-paced digitalization and globalization. Mexico City's national business hub enables local customers, service providers and international customers to grow their operations in Latin America and join a robust ecosystem, operated by one of Mexico's largest network-neutral data centers.

Mexico is the world's 11th-largest economy and the second-largest country in Latin America. At the heart of the rapid market growth, Mexico City hosts banks, telecom networks, local enterprises and more providers that seek the IT modernization, global interconnection and hybrid solution development Equinix provides.

### Mexico City metro facilities

Our two International Business Exchange™ (IBX®) data centers are strategically located in Querétaro, outside of seismic zones without flood risk, offering 43,300+ sq. ft. (4,000 sq. m) of colocation space. Both are carrier-neutral facilities with multiple diverse fiber entry points that include five network

service providers currently operating within each data center. Customers in Mexico City can mobilize to connect to their networks locally now, while other customers aiming to expand their colocation footprint to Mexico can broaden their ecosystems and connect to the Infomart™ Data Center in Dallas, the NAP of the Americas (NOTA) facility in Miami, Latin America and South America.

Our MX1 facility (110,000 gross sq. ft.) is the first data center in Latin America with an energy cogeneration system and up to ICREA (International Computer Room Experts Association) Level 5 Certifications. MX2 will provide expansion opportunities of up to 6,000 sq. ft. of colocation space and 8 MW of capacity. Furthermore, Mexico City customers can connect to top cloud service providers via Equinix Fabric™ and obtain direct access to the Mexico City Internet Exchange.

To learn more about interconnection opportunities in Mexico City, visit the Explorer feature within [Equinix Marketplace](#).
